

💡 Key Insights —

Inventory & Stock

- **Total inventory value: ₹22,43,092.00** across all in-stock items
- **14,959 total units** available across the catalog
- **12.14% of SKUs are out of stock** – a meaningfully high OOS rate for a quick-commerce store
- Highest-value out-of-stock items include **Patanjali Cow's Ghee (₹565.00 MRP)** and **MamyPoko Pants Standard Diapers (₹399.00 MRP)** and Aashirvaad Atta With Mutigrains (₹315.00 MRP)

Pricing & Discounts

- **Average discount across the catalog is only 7.62%** – relatively conservative for a quick-commerce platform
- Highest discounts (51%) are concentrated in snack items – **Dukes Waffly Wafers** (All flavours), **RRO Mozzarella Block Cheese**, **Ceres Foods Laal Maas** and **Chef's Basket Pasta** lead the discount list
- **82 products** are priced above ₹500 but discounted less than 10% – premium items that are under-promoted compared to the rest of the catalog
- **Fruits & Vegetables has the highest average discount (15.46%)** – nearly double the next category, likely due to perishability pressure

Category Performance

- **Munchies and Cooking Essentials are joint top revenue categories** at ₹337,369 each – but see the data-quality note below
- Products weighing ≤500 (Low weight bucket) account for **12,902 units** out of a total physical stock of 14,959 units, which comes out to **86.25%**

Value-for-Money

- **Onion and Tata Salt offer the best price-per-gram (₹0.02/g)**

⚠️ Data Quality Finding (most important insight)

- **"Munchies" and "Cooking Essentials"** — two completely unrelated categories — show identical product counts (**514 each**), identical total revenue (**₹337,369**), and identical total inventory weight (**1,404.65 kg**)

This is not a coincidence and not a query error. It strongly suggests the dataset was generated with duplicated/mirrored category data rather than genuinely independent categories.
